SUMMARY

Aspiring Data Engineer with strong foundation in Python, SQL, and data processing. Experienced in building end-to-end ETL pipelines, cleaning and transforming large datasets, and storing structured data for analysis. Passionate about solving real-world data problems and building scalable data systems.

SKILLS

- **Programming:** Python
 - **Libraries:** Pandas, NumPy
 - **Database:** MySQL / PostgreSQL
 - **Concepts:** ETL Pipelines, Data Cleaning, Data Transformation
 - **Tools:** Git, Jupyter Notebook
 - **(Optional Advanced):** Apache Spark, Airflow, AWS/Azure
-

PROJECTS

♦ ETL Pipeline for Sales Data

- Built an end-to-end ETL pipeline using Python and SQL
 - Processed and cleaned 50,000+ records (handled missing values, duplicates)
 - Transformed raw data into structured format using Pandas
 - Loaded cleaned data into MySQL database for reporting
 - Improved data quality and reduced manual effort by automating pipeline
-

♦ Customer Data Cleaning & Analysis

- Cleaned messy customer dataset using Pandas (null values, formatting issues)
 - Performed data transformation and aggregation using SQL
 - Generated insights like top customers and revenue trends
 - Optimized queries using joins and group by operations
-

♦ (Optional Advanced Project) Data Pipeline with Automation

- Built automated data pipeline using Python scripts / Airflow
- Scheduled workflows for daily data processing

- Simulated real-world data ingestion and transformation
-

EDUCATION

Bachelor's Degree in [Your Field]
[Your College Name], [Year]

ADDITIONAL INFORMATION

- Solved 100+ SQL queries (joins, subqueries, aggregations)
 - Active learner sharing projects on LinkedIn
 - Strong problem-solving and analytical skills
-
